Summary

Software engineer with 8+ years building scalable systems — from Go services and event-driven pipelines to Django platforms serving 3M+ users. Skilled in API development, cloud infrastructure (AWS, Kubernetes), and database-backed services (PostgreSQL), with a track record of mentoring engineers, partnering cross-functionally with product teams, and leading end-to-end delivery on high-availability, high-traffic platforms.

Work History

Heisenberg Network (Noraya), AI Software Engineer — Canada · Remote — Mar 2026 – present

- Contributed to Heisenberg's real-time market intelligence platform — aggregating live data from prediction markets (Polymarket, Kalshi, Hyperliquid, Limitless) and delivering actionable intelligence to end users.
- Built a Go WebSocket service for real-time market event subscriptions — wallet-based credit billing, JWT auth, and Redis-backed filter routing with operator and range expressions.
- Built an LLM semantic retrieval API mapping natural-language prompts to SQL via agent selection, with retry-aware planning and MCP multi-domain support (Go-native SDK).
- Owned service deployment and infrastructure on Kubernetes (AWS), including automated health-checks and alerting for data freshness.
- Wrote unit tests for Go services, run automatically in CI on every push to keep releases stable.

Nilva (MCI Partner), Software Engineer · Backend — Tehran — July 2022 – Feb 2026

- Designed scalable services managing high-volume, real-time data with seamless performance under thousands of concurrent users.
- Optimized infrastructure for high availability, reliability, and fault tolerance; partnered with product to turn business needs into technical solutions.
- Grew into tech lead on key projects — BaEnergy, MCI Sport, and MCI Game — owning end-to-end delivery of Django & Next.js solutions.
- Mentored junior developers on backend architecture, best practices, and code review.
- Maintained unit and integration test coverage for Django services, run in CI on every merge request.

Hezardastan Group (Gharar), Backend Developer · Django — Tehran — July 2020 – June 2022

- Started as an Android developer for the first year, then moved into Django and Python-based backend development for the second year, within one of Iran's largest tech holdings (Cafe Bazaar, Divar, Balad), following Agile/Scrum practices.
- Contributed to open-source projects including Jitsi and Ejabberd.

Soroush Messenger, Android Developer — Tehran — June 2018 – June 2020

- Started my career as an Android developer on a messaging app with 20M+ registered users.
- Worked with the Telegram Android source code as an open-source foundation.

Projects

Ba-Energy (2024)

Led end-to-end development and scaling of a national platform helping electricity consumers across Iran reduce energy consumption — backed by PostgreSQL at scale — using gamification and rewards to drive behavioral change.

- 3M+ users in 4 months · 4.6/5 rating (12K reviews) · 2900 req/s peak · 160K new users/day

Education

MBA **Sharif University of Technology**, Strategy — Jan 2022 – Jan 2025

B.Sc. **Sharif University of Technology**, Computer Engineering — Jan 2016 – Jan 2021

Skills

Languages & Frameworks: Go, Python, Django, React.js, Next.js

Infrastructure & Data: AWS, Kubernetes & GitOps, Docker, PostgreSQL

Engineering & Leadership: Team Leadership, LLMs & AI Systems

Honors and Awards

#13 — National university entrance exam: Math & Physics · 2016

#6 — National MBA entrance exam: 2021

PM — Product Management cert.: Bozhan School · 2022
